

Supplemental Figure 4. Striatal c-fos mRNA levels are transiently increased 30min after SKF treatment. mRNA levels for c-fos from striatum and ventral midbrain of animals treated for 1 (acute), 2 days, or 10 days with Sal+SKF or SB+SKF or SB+Sal or Sal+Sal and sacrificed 30min or 2 hours (2hrs) after the last injection. Data from qRT-PCR expressed as mean \pm S.E.M. after normalization to 18S rRNA. N=3-5/group, *, $p < 0.05$; **, $p < 0.01$.
